

VEDA TASK 5 – EXCEL DATA ANALYSIS

Project Report

Project: Sample Superstore Data Analysis

Tool Used: Microsoft Excel

Author: Reethika

1. Project Overview

This project was completed as part of VEDA Task 5 – Excel Data Analysis. The objective was to analyze the Sample Superstore dataset using Microsoft Excel and identify useful business insights related to sales, profit, quantity, discount, categories, regions, customer segments, and shipping modes.

2. Objective

- Analyze sales and profit performance across different business dimensions.
- Calculate key performance indicators (KPIs).
- Perform category-wise analysis using Excel formulas.
- Create PivotTables to summarize the dataset.
- Identify meaningful findings and present them in a clear summary.

3. Dataset

The Sample Superstore dataset contains 9,994 records and 13 columns. The analysis uses fields including Ship Mode, Segment, Country, City, State, Postal Code, Region, Category, Sub-Category, Sales, Quantity, Discount, and Profit.

4. Tools and Techniques

- Microsoft Excel for data analysis and reporting.
- SUMIF for category-wise total sales.
- AVERAGEIF for category-wise average profit.
- COUNTIF for category-wise record counts.
- COUNTIFS for category-wise records with discount greater than zero.
- PivotTables for Category, Region, Segment, and Ship Mode analysis.

5. Key Performance Indicators

KPI	Value
Total Sales	2,297,200.86
Total Profit	286,397.02
Total Quantity	37,873
Average Discount	15.62%
Profit Margin	12.47%

6. PivotTable Analysis

- **Category:** Technology recorded the highest sales and profit among the three categories.
- **Region:** The West region recorded the highest sales and profit among the four regions.
- **Segment:** The Consumer segment contributed the highest sales and profit.
- **Ship Mode:** Standard Class recorded the highest sales among the shipping modes.

7. Key Findings

- Technology is the strongest-performing product category in terms of both sales and profit.
- The West region leads the other regions in overall sales and profit.
- The Consumer segment contributes the largest share of sales and profit.
- Standard Class is the most significant shipping mode based on sales.
- The dataset shows positive profitability, with a profit margin of approximately 12.47%.

8. Conclusion

The Excel analysis provides a clear overview of Sample Superstore business performance. Excel formulas were used for category-level calculations, while PivotTables summarized sales and profit across multiple business dimensions. The results highlight key contributors to overall performance and provide useful business insights.

9. Project Deliverables

- Completed Excel workbook containing the dataset and analysis.
- Formula-based analysis using SUMIF, AVERAGEIF, COUNTIF, and COUNTIFS.
- Four PivotTables for business analysis.
- Summary sheet containing five KPIs and key findings.
- Project report in PDF format.
